2. Product Standard and Performance Test

Nichiryo a member of the drafting committee of Japan Industrial Standards JIS K 0970 (Piston operated micro-volumetric apparatus) for the standardization of pushbutton type pipettes enacted in 1989, Nichiryo develops pipettes based on this standard. In addition, the performance test by international standard ISO8655 (Piston operated volumetric apparatus) is executed by the customer's demand.

3. Traceability Management

Nichiryo guarantees the accuracy performance of products systematically with calibration traceability to clarify the accuracy of the measured value of Nichiryo's reference standard apparatus, such as the balances, weights, and thermometers, to agree with the national measurement standard. Nichiryo manages pipettes by the serial number, and to facilitate the traceability of them, we have constructed the consistent record system from manufacturing to repair in our company.

Among the world's lightest Micro Pipettes

Nichipet® Air -Multi Channel-

Multi channel model of 'Nichipet Air' among the world's lightest pipette with world class Accuracy and Precision.

Volume adjustment by the exclusive jig is only have to set the volume into the scale marks.

Up to 50% reduction in stroke load pressure compared with conventional models.

Volume setting rotator is independent from the push button. Avoiding the volume shift during pipetting.

The shape to fit the hands based on the ergonomics.

The volume can be checked during pipetting.

Keeps the same durability as previous model and reduce the weight as 20% at maximum. Operability is improved with compact design. Fully autoclavable.

The pipette volume (Cat. No.) is recognized in one glance by volume notation of 4 positions.

- In order to reduce fatigue during long-term use, significant weight reduction and stroke load reduction have been achieved.
- The entire body is autoclaved (121° C, 20 minutes) with possible durability and the highest level of accuracy and repeatability.

In order to discharge the set dispensing amount, maximum volume range of 10 μ L have high-performance blow-out function.

This function improves attachment of the tips from the rack.

Tip

- The fine design and finishing of the top of the tips reduce the surface tension of liquid and ensure the tip to be residue free.
- The excellent sealing and discharge ability enable high accuracy of pipetting.
- Chemical and heat resistant, for which the advanced material "Highly purified polypropylene" is used.
- Fully autoclavable. (121°C for 20 minutes) Racks can be autoclaved as well. (*Exceeding the recommended standard for autoclaving may cause deformities)
- The tips being able to be attached directly from the racks avoids dirt and dust from getting in, thus rising the efficiency of the operations.
- DNase/RNase free (excludes X/Z series)
- UV resistant
